

DNA Schedule

When planning your DNA testing being done at the Canadian lab there are several very important things to remember:

1. During the busiest time for registrations, there is still only one testing day for each month – usually the first week of the month. The lab cannot guarantee an exact day.
2. It takes 10 - 14 working days to receive results.
3. Samples are tested in batches. If a sample is not received at the CLAA office on any of the following deadline dates, it will have to be held until the next scheduled testing.

DNA samples will be mailed one a month (end of month)

There are no deadlines for breeders using foreign DNA parent verification reports to register their alpacas with the CLAA. But, please remember the DNA report must be legible and it must provide the animal's DNA case number, as well as the qualified dam and sire – just the markers/panels are not acceptable. Please also remember to send a copy of its foreign certificate with the CLAA application for registration. If you require an example of what the acceptable DNA form looks like, please contact the office by email.

There is an \$10 fee (plus applicable tax) for manual data entry of these foreign profiles.
